Marie-Hélène Durand

ORSTOM

Paris, FRANCE

# UNDERSTANDING CLIMATE CHANGE AND FISHERY DYNAMICS

First International CEOS Meeting, Sept. 1994

- Understand How the Environment Affects Fish Dynamics
- Understand What Changes the Climate is Undergoing or is Likely to Undergo
- Combine the Above to Present Scenarios for the Future
- Techniques to be Discussed Mainly Aimed At Second Question

# WHAT IS CHANGE?

First International CEOS Meeting, Sept. 1994

**Change in the mean level (trend):**

**Change in the seasonal cycle:**

**Change in the variance structure:**

# STATISTICAL CHARACTERIZATION OF CHANGE

First International CEOS Meeting, Sept. 1994

- TRENDS

- Global and/or Local variability
- Long-term trend or change in the seasonal component?
- Time and frequency domains can both be considered

- NON-STATIONARY SPECTRA

- Changes in the variance structure through time

- REGIME SHIFTS

- Tests and modeling of shifts between regimes
- Hidden Markov Models

- LONG-TERM MEMORY MODELS

- Persistence of events through time
- Related to "chaotic dynamics"

# DECOMPOSITION OF A TIME SERIES

First International CEOS Meeting, Sept. 1994

## Original Series

=

## Trend

+

## Seasonal

+

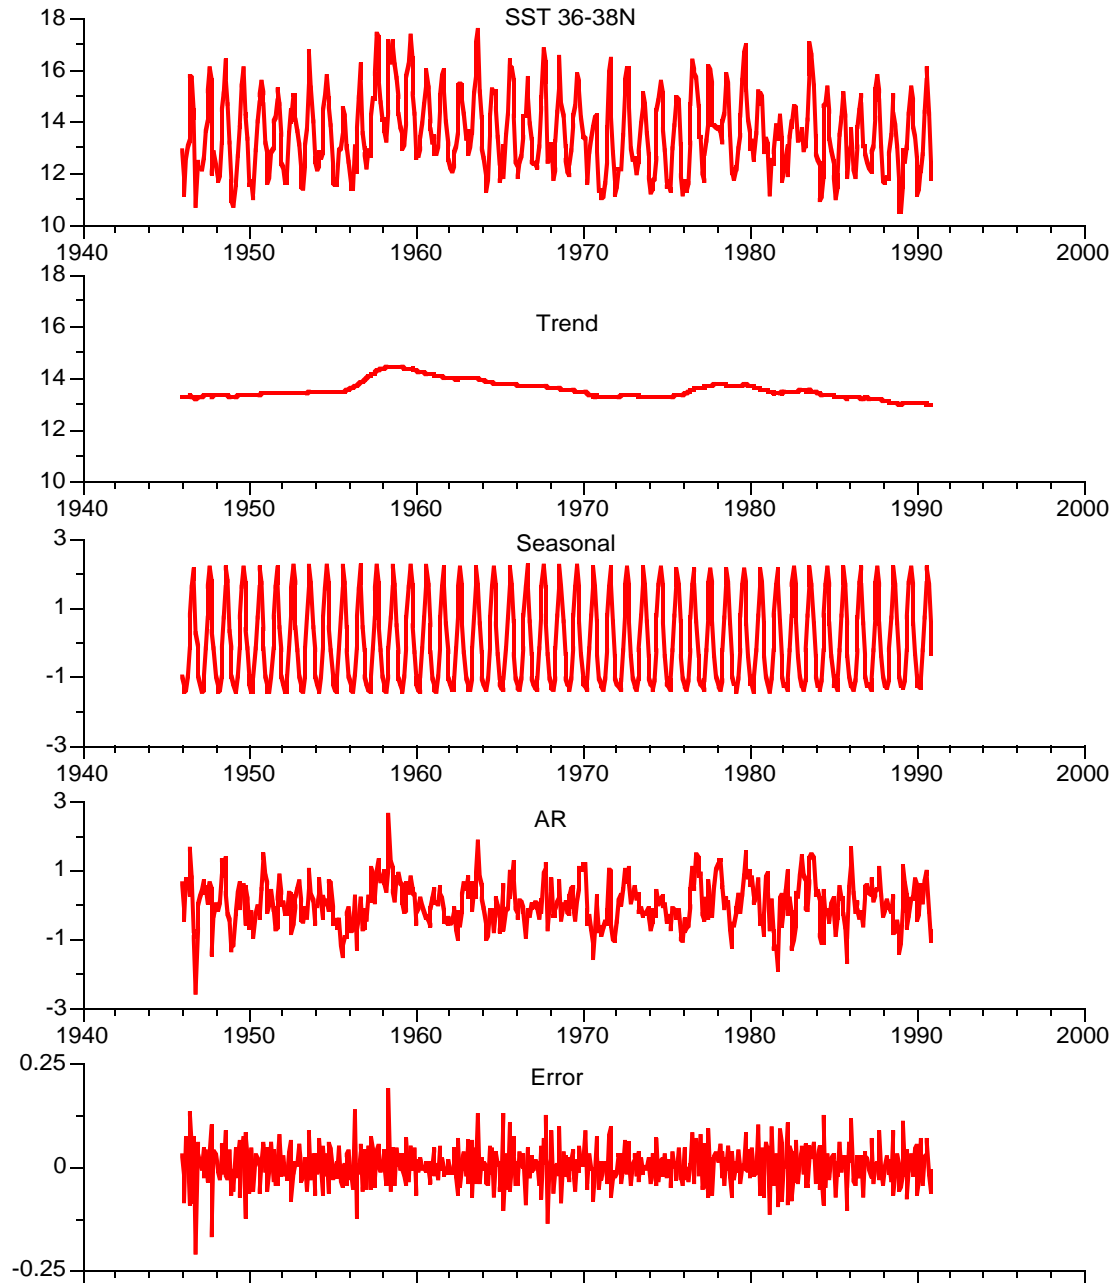

## AR

+ ERROR

# EXAMPLE: SST OFF CALIFORNIA COAST

First International CEOS Meeting, Sept. 1994

# CALCULATION OF TREND

First International CEOS Meeting, Sept. 1994

# CALCULATION OF SEASONAL

First International CEOS Meeting, Sept. 1994

# CALCULATION OF SEASONAL (AGAIN)

First International CEOS Meeting, Sept. 1994

# CALCULATION OF AR

First International CEOS Meeting, Sept. 1994

# EXAMPLE: N-S WIND STRESS OFF CALIFORNIA

First International CEOS Meeting, Sept. 1994

# SEASONAL COMPONENT

First International CEOS Meeting, Sept. 1994

# AR AND ERROR SERIES

First International CEOS Meeting, Sept. 1994

# EXTENSIONS OF METHODOLOGY

First International CEOS Meeting, Sept. 1994

- Statistical tests of change points, linearity etc.
- Ability to model more exactly abrupt changes
- Multivariate factor model
  - One or more common trends - can differ by affine transformation
  - One or more common seasonals - can differ by affine transformation
  - Can perform analysis of variance type tests for which model is "best" alternative
